Education

Masters in Computer Software Engineering, Arizona State University

Jan 2022 - Dec 2023

- **Courses** : Foundations of Software Engineering, Software Agility, Software Security, Semantic Web Engineering

Bachelor of Electrical and Communication Engineering, VNR VJIE

Jul 2017 - Aug 2021

- **Courses** : Operating Systems, Computer Networks, OOP in Java, Data Structures and Algorithms

Skills

Languages : C, Python, HTML, CSS, JavaScript, jQuery, Typescript, Go

Technologies : React.js, Next.js, Node.js, Express.js, React Native, Flask, MongoDB, PostgreSQL, Git, Docker, AWS

Other : REST, Linux, Cypress, Jest, Web Sockets, Swarm, Kubernetes, GraphQL, AdobeXD, Figma, OAuth

Professional Experience

Junior Software Developer - Mobile Application Team

Jan 2023 - May 2023

Whistle Technologies Inc, Internship, Remote

Winnipeg, Canada

- Developed a hybrid mobile platform for an existing tele-communication web application using JavaScript and React Native, resulting in 90% code share between iOS and Android while reducing development time by 46%.
- Architected the application with a focus on maximizing component reusability, resulting in a significant increase of 44% in overall reusability.
- Responsible for design and development of various components such as tab bars, image picker, document picker, authentication pages and navigation using react-native.
- Improved branch coverage by 62% by writing tests in Jest and Cypress.
- Used Git for version control of the source code and followed Agile practices for smooth project delivery.

Software Developer - UI Development Team

May 2020 - Dec 2020

Triant Software Solutions, Internship, Hybrid

Hyderabad, India

- Contributed to scalable and robust single page web application development using MongoDB, React.js/Redux, Express and Node.js (MERN Stack).
- Built reusable React components, ensuring modularity and scalability for future page implementations.
- Employed React Axios to efficiently retrieve data from backend web APIs, integrating with Redux to seamlessly update the global application state.
- Utilized MongoDB for data storage, designing schemas and data access services to facilitate effective communication with the database.
- Implemented server-side caching strategies in Node.js server, resulting in a significant performance boost of 30% by optimizing response times and reducing network requests.

Projects

Taiga Viz	Designed a responsive web application using React.js to visualize metrics evaluated from Taiga API
Guet	Improved the Guet library for pair programming by extending it with new features and bug fixes.
Covid-19	Developed a web application to visualize the covid-19 data for india using semantic web engineering.
Rover Design	Created a virtual robot using ROS and simulated the movement of the rover in a virtual environment.
Venom	Crafted the interpreter and parser for a custom programming language using python and prolog.
