Skills

- Python | JavaScript | TypeScript | Go | C/C++ | Java | PostgreSQL | SQLite | Node | Express | MongoDB | Socket.IO | Redis | SQL | NoSQL
- React.js | React Native | Redux | Bootstrap | Tailwind CSS | Sass | MUI | Chart.js | Google Charts | Three.js | D3.js | jQuery | HTTP | Git
- Nest.js | Django | Fastapi | Docker | Kubernetes | Github Actions | CI/CD | Jest | Cypress | AWS | GCP | OOP | Swagger | REST | GraphQL
- Microservices | Distributed Systems | Agile | Scrum | DevOps | Kanban | XP | Lean | Linux | JWT | OAuth | Frontend | Backend | Full-Stack

Experience

Software Engineer	Roomie Finder	Tempe, AZ, USA	01 2024 - present
• Spearheaded the end-to-end development of a cross-platform mobile application for Android and iOS from inception, leveraging React Native, Nest.js, Typescript, and AWS DynamoDB, streamlining the roommate matching process for leasing communities. • Developed robust multi-factor authentication, role-based access control, and Google OAuth integration using AWS Cognito and GCP, fortifying security while enabling seamless scaling to handle tens of thousands of users and providing a frictionless login experience. • Containerized microservices using Docker and orchestrated with Kubernetes on AWS EKS (Elastic Kubernetes Service), enabling auto scaling to handle traffic spikes of up to 500% without performance degradation, achieved 99.99% uptime through fault-tolerant design.			
Software Developer	Arizona State University	Tempe, AZ, USA	07 2023 - 12 2023
• Engineered scalable APIs utilizing Nest.js, integrating automated background workers through cron jobs for compute-intensive tasks, decreasing latency by 20% while minimizing maintenance overhead through efficient offloading of resource-intensive operations. • Streamlined and modularized multiple components by leveraging MVC design patterns, significantly enhancing code reusability across the entire organization. This strategic implementation resulted in a remarkable 15% reduction in development timelines. • Established robust CI/CD pipelines leveraging Jenkins for automated pull requests, code reviews, and comprehensive testing (load, stress, unit, end-to-end, integration), ensuring efficient development and deployment processes with quality assurance at every stage.			
Junior Software Developer	Whistle	Tempe, AZ, USA	01 2023 - 06 2023
• Crafted a cross-platform mobile application unifying voice and messaging communication through React Native, Node.js, Typescript, and MongoDB, enabling frictionless integration and real-time data synchronization across multiple devices and platforms. • Integrated Twilio APIs for seamless real-time messaging and voice calling, ensuring uninterrupted connectivity. Handled concurrent sessions for up to 10,000 users, enabling smooth communication on a massive scale within our application's architecture. • Developed WebSocket-based real-time communication leveraging Socket.IO, facilitating instant message delivery with an industry leading average latency of less than 100ms, providing a flawless and highly responsive messaging experience. • Implemented distributed caching using Redis, reducing database load by 60% and improving response times by 30% for frequently accessed data, enabling efficient handling of high-traffic scenarios and boosting application performance.			
Software Developer	Arizona State University	Tempe, AZ, USA	02 2022 - 01 2023
• Engineered enterprise-level microservice applications generating \$17 million in annual revenue, leveraging cutting-edge technologies like React, Typescript, Nest.js, Docker, PostgreSQL, and SQLite. Performed Redis queue caching to enhance API services. • Implemented robust unit testing on client side using Jest, ensuring reliability and diminishing client side errors by 40%. • Configured ETL pipelines for diverse data migrations, resolving issues, maintaining end-to-end pipeline integrity for efficient data flow.			
Software Development Engineer	Triant Software Solutions	Hyderabad, TS, IND	05 2020 - 12 2020
• Created a comprehensive full-stack application for an Indian aesthetic vintage souvenirs and clothing store, accommodating a user base of 50k+ individuals. Utilized React.js, Redux, Node.js, Express.js, and MongoDB to deliver a smooth shopping experience. • Built and Designed 3 REST APIs with Node.js, TypeScript and Swagger, enhancing application functionality and performance. • Engineered Cypress automation to significantly reduce front-end bug resolution time by 30%, thereby improving UI reliability.			

Education

Master of Science	Arizona State University	Tempe, AZ, USA	December 2023
• Major in Computer and Software Engineering - GPA 4.0/4.0			
Bachelor of Technology	VNR VJIET	Hyderabad, TS, IND	August 2021
• Major in Electrical and Computer Engineering - GPA 8.62/10			

Projects

Quick Snip (Typescript, Node.js, PostgreSQL, Swagger, Jest, GCP)	February 2024
• Established a reliable API utilizing Node.js, Express.js and PostgreSQL, optimizing URL shortening services. • Implemented a CI/CD pipeline with GitHub Actions, automating build and testing processes to streamline development workflows. • Deployed the application on Google Cloud Platform's App Engine, leveraging managed PostgreSQL for robust data storage, ensuring high availability and reliability with automated scaling features.	
Receipt Processor (Go, Gin, Docker)	January 2024
• Engineered a Go-based web service with Gin framework to achieve point based reward calculation from receipts, promoting accuracy.. • Containerized application with Docker, streamlining deployment processes and reducing setup time by 50%. • Implemented comprehensive end-to-end and unit tests with Go's testing library, ensuring robustness and reliability of application.
