Skills

- Python | JavaScript | TypeScript | Go | C/C++ | Java | PostgreSQL | SQLite | Node | Express | MongoDB | Socket.IO | Redis | SQL | NoSQL
- React.js | React Native | Redux | Bootstrap | Tailwind CSS | Sass | MUI | Chart.js | Google Charts | Three.js | D3.js | jQuery | HTTP | Git
- Django | Flask | Fastapi | Docker | Github Actions | CI/CD | Jest | Cypress | Cucumber | AWS | GCP | OOP | Swagger | REST | GraphQL
- Microservices | Distributed Systems | Agile | Scrum | DevOps | Kanban | Lean | XP | Linux | JWT | OAuth | Frontend | Backend | Full-Stack

Experience

Graduate Student Assistant **Arizona State University** **Tempe, AZ, USA** **07/2023 - 12/2023**

- Created coding exercises in **C**, **C++**, **Java**, **SQL**, and **Prolog**, covering application and functional programming.
- Offered individualized mentoring to guide students through coding challenges, fostering collaboration.
- Instructed the implementation of design patterns, enhancing code **reusability** and **scalability** in student projects.
- Emphasized **DevOps** principles, **automation**, **CI/CD**, and taught **JUnit** for testing and **Maven** for build automation.

Junior Software Developer **Whistle** **Tempe, AZ, USA** **01/2023 - 06/2023**

- Developed **Socket.IO**-based **WebSocket** functionalities, enabling real-time communication between users. Ensured instant delivery of messages and facilitated seamless voice call connections for an enhanced user experience.
- Enhanced message retrieval in the mobile app using **Node.js** by implementing server-side pagination and optimizing queries. Achieved a 40% improvement in response times through reduced payload size and efficient database queries.
- Implemented client-side caching using **Redis clusters** to optimize data retrieval and reduce latency. Leveraged Redis as a fast and scalable caching solution, enhancing the overall performance and responsiveness of the application by 50%.
- Integrated **Auth0** with the **React Native** application to implement **OAuth** Authorization, enhancing security measures for user **authentication** and ensuring a robust and reliable **authorization** process.
- Implemented robust **unit testing** on the client side using **Jest**, ensuring the reliability and stability of frontend components.
- Maintained version control using **GitHub**, achieving a 20% reduction in deployment times and ensuring a streamlined collaborative development process.
- Followed **Agile** SDLC and **Scrum** methodology, leading successful sprint cycles and contributing to a 15% improvement in project Efficiency.

Software Developer **Arizona State University** **Tempe, AZ, USA** **02/2022 - 01/2023**

- Engineered enterprise-level **microservice** applications, generating \$17 million in annual revenue, leveraging **React**, **Flask**, **Docker**, **PostgreSQL**, and **SQLite**. Implemented Redis queue caching to optimize API services.
- Designed and implemented scalable APIs with **Python Flask**, introducing automated background workers through **cron** jobs for computationally intensive tasks. Reduced latency significantly and minimized maintenance time by 20%.
- Streamlined and modularized multiple components using **Microservices** and **MVC** design patterns, enhancing code reusability across the organization. Documented usage, resulting in a notable reduction in development time.
- Established automated **CI/CD** pipelines for pull requests, code reviews, and comprehensive testing (load/stress, unit, integration, e2e), ensuring a seamless and efficient development process.
- Configured **ETL** pipelines for diverse data migrations, proactively resolving issues, and maintaining end-to-end pipeline integrity.

Software Development Engineer **Triant Software Solutions** **Hyderabad, TS, IND** **05/2020 - 12/2020**

- Enhanced deployment with **Docker Compose**, reducing provisioning time by 25% for improved development efficiency.
- Implemented **Cypress automation**, cutting front-end **bug resolution** time by 30% for enhanced UI reliability.
- Engineered **React.js/Next.js** web app, boosting page load speed by 20% for an improved user experience.
- Developed **Django Rest API**, achieving a 15% reduction in response times for optimized data retrieval.
- Deployed services on **AWS**, increasing scalability by 25% for improved reliability.
- Implemented **JWT** authentication, reducing unauthorized access attempts by 20% for enhanced security.

Education

Master of Science **Arizona State University** **Tempe, AZ, USA** **01/2022 - 12/2023**

- Major in Computer and Software Engineering - **GPA 4.0/4.0**

Bachelor of Technology **VNR VJIE** **Hyderabad, TS, IND** **08/2017 - 08/2021**

- Major in Electrical and Computer Engineering - **GPA 8.62/10**

Projects

- **Quick Snip**: Developed a URL shortening service with **Django Rest Framework (DRF)** and deployed it on **GCP App Engine**. (01/2024)
- **Taiga Viz**: Created a **React.js** dashboard to visualize key metrics from **GitHub** and **Taiga APIs** for insightful project analysis. (05/2022)
